SAFETY HINTS

- Read these instructions
- Keep these instructions
- Heed all warnings
- Follow these instructions

Caution: To reduce the risk of electric shock, do not open the amplifier’s case. Avoid exposure to rain or moisture. No user serviceable parts inside, refer all service to a qualified technician. No vessel filled with liquids, such as vases shall be placed on top of the unit.

This symbol, wherever it appears, alerts you to the presence of dangerous non-insulated voltage inside the case. Risk of electric shock!

This symbol, wherever it appears, indicates to important operating and maintenance instructions in this user manual. Please read the manual.

This recycling logo informs the end user that it is forbidden to throw away the product in the trash. It has to be disposed of accordingly.

Weee-Nr.: DE93670540

CB Approved

RoHS 2002/95/EC
Congratulations on the purchase of the new Warwick amplifier head/combo. Please read through these instructions before connecting and operating the device. If you keep to the guidelines set out in this manual, you will soon be able to appreciate the quality of this new Warwick amplifier. Please keep this instruction booklet handy in case you need to consult it again. Please send the PASSPORT to the address indicated therein.

RECOMMENDATIONS

The following recommendations are designed to ensure that the device always functions reliably:

• Never open the casing! To do so would expose you to the risk of an electric shock. Should repairs prove necessary, leave them to qualified service personnel.
• Avoid dust and high moisture levels, direct sunlight and extremely high or low temperature.
• Safeguard the device from excessive vibration. Always place the unit on a stable and horizontal surface.
• See to adequate ventilation. The device should not be placed on soft surfaces (carpet, cushions, etc.). When mounting it in a rack, make sure that the rear and lateral cooling vents remain unobstructed.
• Avoid leaving the unit near radiators or other objects producing heat.
• Internal components should only be adjusted or cleaned by qualified service technicians. Ensure no object or liquid penetrates the device through its cooling vents.
• When replacing a fuse make sure you fit in one of identical value!

Have the device examined by a qualified service technician in the following cases:

• the mains lead or mains switch have been damaged,
• objects or liquids have penetrated the device,
• it has been exposed to excessive moisture,
• malfunctions or abnormal operating conditions have occurred,
• the device has been dropped or the casing damaged.

HINTS

- This apparatus shall not be exposed dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the apparatus.
- This apparatus should be connected to a MAINS socket outlet with a protective earthing connection.
- Mains plug or appliance connector shall be used as the disconnect device, so mains plug or appliance connector should always remain readily operable.
- If the apparatus shows any malfunction, immediately disconnect the main power cord from the mains socket.
- Do only operate effects pedals in-between the instrument and the amplifier, as these devices are not designed for the supplied load of an effects loop.
- Remove the plug whenever changing a fuse.
- Only ever replace a fuse with another of the same type. Never bridge defective fuses.
- Make sure the top and bottom of the device are properly ventilated and that the vents are not blocked.
- Do not subject the device to excessive vibration or hard jolts as these could damage the device.
- Don't undertake repairs yourself.
- Only allow the case to be opened by qualified personnel. (Remove the plug).
- Repairs should only be undertaken by qualified personnel.

SHOULD YOU FIND YOURSELF ONE DAY WONDERING: “WHY IS THERE NO SOUND COMING OUT?”

please check:
- all stub cables,
- all connections of these cables
and proceed anew by following the guidelines of the chapter GETTING STARTED. Possibly the problem reveals to be an operational error.
PROTECTIVE CIRCUITS

Your new Warwick amplifier is equipped with a series of circuits to prevent it from destruction in case of inadequate operating conditions:

**Power-up delay:** When the unit is switched on, the SPEAKER OUT sockets are activated with a slight delay to protect the loudspeakers.

**Short-circuit:** In the event of a short-circuit at the power amp outputs, this feature prevents the output stage transistors from destruction by quickly reducing current.

**Direct current (DC):** This circuit continuously monitors the power amp output for direct current and protects the loudspeakers from overload should a transistor burn out.

**HF oscillation:** By switching the power amp off, this safety feature prevents from damages that could be caused by frequencies in excess of 20 kHz (feedback, etc.).

**Excessive temperatures:** Should the temperature-regulated fan cooler prove to be insufficient in extreme conditions, this circuit protects the output stage transistors from destruction by switching the device off.

**Note:** Note: You can recognise that one of these circuits has been activated as a result of a fault, when the MUTE LED glows continuously even though you have not selected the MUTE mode. In case of a short-circuit please check the speaker cable. The amplifier must then be switched off and on again, to get back into playing mode after having removed the short-circuit. In any other situation on the amplifier switches automatically back to playing mode as soon as it detects the fault has disappeared (e.g. the amplifier has overheated and cooled down again).

GETTING STARTED

1. Make sure that loudspeakers capable of sustaining the load of a bass signal are connected to the SPEAKER OUT sockets (the speaker cables should meet a cross-section of at least 2 x 1.5 mm).
2. Check that the mains supply has been plugged in and that all external (effects) units possibly used are correctly connected and operational.
3. Set the MASTER control to zero.
4. Plug your bass guitar into the amplifier’s INPUT with a shielded line-cable.
5. Press the POWER switch to turn the device on.
6. Switch MUTE off and the red LED will extinguish.
7. Switch the COMPRESSOR off (the 2-coloured LED will extinguish).
8. Turn all volume controls of your bass guitar on to their maximum.
9. Adjust the GAIN control until the (loudly) played bass signal flashes the Clip LED.
10. Set the MASTER control to the volume you wish to play at.
11. Adjust the sound that you wish with the controls and switches described in the respective chapters FRONT PANEL CONTROLS.
12. If necessary readjust GAIN.
**FRONT PANEL CONTROLS**

**INPUT** Socket to plug in a bass guitar.

**GAIN** Control + CLIP LED to adjust the input level.

**COMPRESSOR** Switch to activate the compressor control to adjust the level of compression.

**CONTOUR** Switch to activate the contour control to adjust the level of the contour (bass- and treble boost and mid cut)

**BASS** Control to boost/cut deep frequencies.

**LOW MID** Control to boost/cut low mids.

**HIGH MID** Control to boost/cut high mids.

**TREBLE** Control to boost/cut high frequencies.

**DEEP** Control to boost/cut high mids.

**BRIGHT** Control to boost/cut high frequencies.

**MASTER** Control determines the mains level.

**MUTE** Switch + ON/MUTE LED cuts the signal from all outputs, except from the PHONES socket and leads the signal to the TUNER OUT socket.

**PHONES** Socket for connecting a headphone (min 200 Ω).

---

**REAR PANEL**

**POWER** Switch for turning the amplifier on and off.

**MAINS IN AC** Terminal with integrated fuse compartment for connecting the amplifier to the current network.

**GROUNDLIFT** Switch isolates the earth connection from the ground of the signal. Should several devices be simultaneously connected to earth by the same conductor as well as via line connections, a so called hum loop might appear. In this case operate GROUND LIFT to eliminate the current hum (when pressed).

**TUNER OUT** Socket for the connection of a tuner. When MUTE mode is activated, the unmodified bass signal is retained here.

**LINE OUT** Socket allows to connect additional power amplifiers or active cabinets.

**EFF. LOOP** For the insertion of effects units. Connect SEND with the input and RETURN with the output of the effects device.

**DI PRE/POST** Switches the signal lying at the DI OUT socket.

**DI OUT** Socket, PRE (pressed) unmodified bass signal, or POST (unpressed) bass signal treated by the tone controls ans possibly by connected effect devices.

**SPEAKER OUT** Socket for connecting the loudspeaker.
**FRONT PANEL CONTROLS**

**INPUT**
Socket to plug in a bass guitar.

**GAIN**
Control + CLIP LED to adjust the input level.

**COMPRESSOR**
Switch to activate the compressor control to adjust the level of compression.

**CONTOUR**
Switch to activate the contour control to adjust the level of the contour (bass- and treble boost and mid cut)

**BASS**
Control to boost/cut deep frequencies.

**LOW MID**
Control to boost/cut low mids.

**HIGH MID**
Control to boost/cut high mids.

**TREBLE**
Control to boost/cut high frequencies.

**DEEP**
Control to boost/cut high mids.

**BRIGHT**
Control to boost/cut high frequencies.

**MASTER**
Control determines the mains level.

**MUTE**
Switch + ON/MUTE LED cuts the signal from all outputs, except from the PHONES socket and leads the signal to the TUNER OUT socket.

**PHONES**
Socket for connecting a headphone (min 200 Ω).

**REAR PANEL**

**POWER**
Switch for turning the amplifier on and off.

**MAINS IN AC**
Terminal with integrated fuse compartment for connecting the amplifier to the current network.

**GROUNDLIFT**
Switch isolates the earth connection from the ground of the signal. Should several devices be simultaneously connected to earth by the same conductor as well as via line connections, a so called hum loop might appear. In this case operate GROUND LIFT to eliminate the current hum (when pressed).

**TUNER OUT**
Socket for the connection of a tuner. When MUTE mode is activated, the unmodified bass signal is retained here.

**LINE OUT**
Socket allows to connect additional power amplifiers or active cabinets.

**EFF. LOOP**
For the insertion of effects units. Connect SEND with the input and RETURN with the output of the effects device.

**DI PRE/POST**
Switches the signal lying at the DI OUT socket.

**DI OUT**
Socket, PRE (pressed) unmodified bass signal, or POST (unpressed) bass signal treated by the tone controls ans possibly by connected effect devices.

**SPEAKER OUT**
Socket for connecting the loudspeaker.
